

Ownology Copy Rewrite — Home & Why Ownology

Framework: I.A. — not AI. Version: Draft 1 for review **Date:** June 2026

Brand Voice Principles (applies to both pages)

The winemaker is always the expert. Ownology is always the apprentice. The intelligence is theirs — accumulated over every vintage, every decision, every hard lesson. Ownology holds it, organises it, and makes it available at 1am when the bandwidth is gone.

I.A. does not stand for Artificial Intelligence here. It stands for:

- **Artisan Intelligence** — craft knowledge, not corporate automation
- **Always Informed** — never caught without an answer
- **Awake at 1am** — there when harvest gets hard
- **Actual Inspiration** — the spark that makes this vintage better than the last
- **Accumulated Intelligence** — everything you know, searchable
- **Answers Instantly** — no delay, no lookup, no interruption

The cycling of these meanings is the brand mechanic. It should appear visually on the homepage hero — the letters “I.A.” cycling through each expansion — and echo as section anchors throughout both pages.

PAGE 1: HOME (/)

SECTION: Nav Label (above headline)

Current: Cellar Intelligence Platform for Winemakers

Proposed: I.A. — Artisan Intelligence for Winemakers

SECTION: Hero

Cycling mechanic — the “I.A.” block

The two letters cycle through meanings with a typewriter/crossfade effect, one at a time, on a ~2.5 second interval:

I.A.

Artisan Intelligence

Always Informed

Awake at 1am

Actual Inspiration

Accumulated Intelligence

Answers Instantly

Artisan Intelligence ← loops back

Headline (unchanged — it works):

Your cellar’s most knowledgeable apprentice.

Subheading (rewrite):

Current: “Log cellar readings. Access 38 industry SOPs across 12 categories. Ask the AI anything. Stay compliant. Ownology is the complete intelligence platform for boutique winery teams — on a mobile phone, during harvest.”

Proposed:

It’s 1am. Fermentation is doing something unexpected. You know your craft — but you also know Ownology has read every SOP in your cellar office and never forgets a word.

That’s not artificial intelligence. That’s *artisan* intelligence.

CTA buttons (unchanged): Join the Waitlist / Start Free Trial

Trust bar (unchanged): TRUSTED BY BOUTIQUE WINERIES ACROSS AU · NZ · US

SECTION: Live Demo Card (hero right column)

The demo card is strong — keep it. The only change is the header label:

Current: Ownology Assistant **Proposed:** I.A. – Artisan Intelligence

The source citation at the bottom stays:

↳ Sourced from: *Your Shiraz SOP* · Scott Labs YAN Guide

This is the proof of specificity — it should never be removed.

SECTION: Pain Points (“The Problem”)

Section label (unchanged): The Problem

Heading (rewrite):

Current: “Four problems every boutique winery knows too well.”

Proposed:

The vintage doesn’t wait for you to find the answer.

Pain point 01 — The Data Entry Trap (rewrite):

Current: “Winemakers scribble Brix readings on whiteboards and paper. Digital systems get updated days later — if at all. The data is always a reconstruction, never a real-time record.”

Proposed:

Readings go on the whiteboard. The digital log gets updated tomorrow — if at all. By the time the record exists, the moment has passed. Ownology captures it in real time, from your phone, with your gloves on.

Pain point 02 — The Knowledge Bottleneck (rewrite):

Current: “During harvest, junior staff constantly interrupt the head winemaker with questions a knowledge base could answer instantly. The winemaker becomes the single point of failure.”

Proposed:

Harvest is six weeks of the head winemaker being interrupted by questions a well-prepared apprentice could answer. Every interruption costs focus. Every unanswered question costs confidence. Ownology is the apprentice who has read everything and is always available.

Pain point 03 — Inaccessible SOPs (rewrite):

Current: “Your SOPs exist — in a binder on a shelf nobody opens. When a seasonal worker needs a protocol, they ask a colleague who might remember incorrectly.”

Proposed:

Your SOPs are excellent. They’re also in a binder on a shelf that nobody opens under pressure. Ownology puts every protocol in your pocket — searchable by question, not by chapter.

Pain point 04 — No Benchmarking (rewrite):

Current: “You know your own numbers intimately, but have no visibility into how your practices compare to regional peers. You’re flying blind relative to the vintage.”

Proposed:

You know your numbers. But when something looks unusual, you have no reference point beyond memory. Ownology gives you the science and the benchmark — so unusual becomes either reassuring or actionable.

SECTION: Features (“What Ownology Does”)

Section label: I.A. in practice

Feature 1 — AI Knowledge Assistant (rewrite title only):

Current title: “AI Knowledge Assistant” *Proposed title:* “Ask anything. Get a cited answer.”

Body (rewrite):

Current: “Ask anything — from complex SO₂ calculations to your own harvest protocols. The assistant searches your uploaded documents and world-class wine science literature, then delivers a precise, cited answer in seconds.”

Proposed:

Ask anything — from DAP additions to stuck fermentation triage to your own harvest protocols. Ownology searches your uploaded documents first, then draws on world-class wine science. Every answer cites its source. No hallucinations. No guessing.

Feature 2 — Smart Cellar Logbook (rewrite title only):

Current title: “Smart Cellar Logbook” *Proposed title:* “Log it now. Find it forever.”

Body (rewrite):

Current: “Log by voice or photo. Snap a handwritten lab slip — Ownology extracts and structures the data automatically. No keyboard. No delay.”

Proposed:

Photograph a handwritten notebook page from 2019. Paste a messy email from your assistant. Ownology reads it, structures it, and adds it to your permanent cellar record. The knowledge that was never in any system — now it is.

Feature 3 — Fermentation Dashboard (keep title, rewrite body):

Current body: “Monitor all active fermentations at a glance. Proactive alerts when a tank deviates from its expected Brix trajectory — before a problem becomes a crisis.”

Proposed:

Every active fermentation, at a glance. When a tank deviates from its expected trajectory, you know before it becomes a crisis — not after. The cellar doesn’t surprise you. You surprise the cellar.

SECTION: The Four Pillars (DO / KNOW / LEARN / GUIDE)

Section heading (rewrite):

Current: (no explicit heading — implied by the four cards) *Proposed section label:* Four ways I.A. works for you

Pillar 01 — DO (rewrite):

Current: “Do — Run Your Cellar. Voice logs, tank readings, barrel tracking, task lists. Everything your team needs to stay aligned from crush to cork — in the pocket, in the cellar, in real time.”

Proposed:

DO — Run Your Cellar. Voice logs, tank readings, barrel tracking, task lists. Everything your team needs to stay aligned from crush to cork — in your pocket, on the cellar floor, in real time.

Pillar 02 — KNOW (rewrite):

Current: “Know — Your Intelligence Layer. 38 industry-standard SOPs, your own Decision Logic, your Tribal Knowledge — all searchable, all cited. When the answer matters, Ownology draws from your protocols first.”

Proposed:

KNOW — Your Intelligence Layer. 38 industry-standard SOPs. Your own Decision Logic. Your Tribal Knowledge — the stuff that lives in your head and walks out the door when your senior winemaker leaves. All searchable. All cited. All yours.

Pillar 03 — LEARN (keep, minor polish):

Current: “Learn — Ask Anything About Wine. From SO₂ calculations to stuck fermentation triage to understanding what terroir actually means. Free Run is open to everyone — winemakers, wine lovers, and the genuinely curious.”

Proposed:

LEARN — Ask Anything About Wine. From SO₂ calculations to stuck fermentation triage to what terroir actually means. Free Run is open to everyone — winemakers, wine lovers, and the genuinely curious. No subscription required.

Pillar 04 — GUIDE (keep, minor polish):

Current: “Guide — Find Your Footing. New to Ownology? Start here. The Getting Started guide walks you through every feature at your own pace. Compliance answers are here too — grounded in current legislation, not generic internet content.”

Proposed:

GUIDE — Find Your Footing. New to Ownology? Start here. The Getting Started guide walks through every feature at your own pace. Compliance answers are grounded in current legislation — not generic internet content.

SECTION: Science / Why It Works

Section label: The science is already inside

Heading (rewrite):

Current: (implied — no explicit section heading) Proposed:

Trained to the standard of a formally qualified winemaker.

Body (rewrite):

Current: “Ownology is trained on the same body of knowledge as a formally qualified winemaker — the equivalent of a Bachelor of Oenology — and is available at 2am during vintage, on a mobile phone, in the middle of a stuck fermentation.”

Proposed:

The knowledge base behind Ownology is built to the standard of a formally qualified winemaker — the equivalent of a Bachelor of Oenology. It covers fermentation kinetics, SO₂ chemistry, malolactic biology, fining agent interactions, regulatory compliance, and cellar operations. Not a wine encyclopedia. A working winemaker’s reference — available at 1am, on your phone, in the middle of a stuck fermentation.

SECTION: The Three Problems (Cognitive Overload / Single Point of Failure / Lookup Problem)

Section heading (rewrite):

Current: (implied) *Proposed section label:* Why winemakers need I.A.

Problem 1 — Cognitive Overload (rewrite):

Current: “During harvest, a winemaker makes hundreds of high-stakes decisions in six weeks — often simultaneously, often alone, often at 2am. When working memory is saturated, decision quality degrades. The knowledge is there. The bandwidth is not.”

Proposed:

Harvest is six weeks of high-stakes decisions made simultaneously, alone, under pressure, often at 1am. When working memory is saturated, decision quality degrades — not because the winemaker doesn’t know, but because the bandwidth is gone. I.A. doesn’t replace the judgment. It removes the lookup so the judgment can do its job.

Problem 2 — Single Point of Failure (rewrite):

Current: “In most boutique wineries, the depth of operational knowledge lives in one person’s head. When that person is unavailable, a significant portion of the winery’s accumulated intelligence goes with them. This is not a failure of documentation. It is a structural reality of small, craft-focused operations.”

Proposed:

In most boutique wineries, the accumulated intelligence of the operation lives in one person’s head. When that person is unavailable — or eventually moves on — a significant portion of

the winery's institutional knowledge goes with them. This is not a failure of documentation. It is the structural reality of craft-focused operations. Ownology makes sure that knowledge is never the single point of failure.

Problem 3 — The Lookup Problem (rewrite):

Current: "The question at 2am is not 'what kind of wine do I want to make?' It is 'what is the correct DAP addition for this tank right now?' That is a lookup problem — and lookup problems are precisely what well-designed AI systems solve, freeing the winemaker's judgment for decisions that genuinely require it."

Proposed:

The question at 1am is not philosophical. It is: "*What is the correct DAP addition for this tank, right now?*" That is a lookup problem. Lookup problems are exactly what I.A. solves — so the winemaker's judgment is free for the decisions that genuinely require it.

SECTION: CTA (Final)

Heading (rewrite):

Current: "Your winery's most knowledgeable apprentice is ready."

Proposed:

I.A. is ready when you are.

Subheading (rewrite):

Current: "Start your 14-day free trial. No credit card. No setup fee. Cancel anytime."

Proposed:

Start your 14-day free trial. No credit card. No setup fee. Works alongside whatever production system you already use. And if you have knowledge that was never in any system — photograph it. We'll read it.

Buttons (unchanged): Start Free Trial / Talk to Us

Footer tagline (rewrite):

Current: "© 2026 Ownology. AI Knowledge Assistant for Boutique Winemakers."

Proposed: "© 2026 Ownology. I.A. — Artisan Intelligence for Boutique Winemakers."

PAGE 2: WHY OWNOLGY (/why-ownology)

SECTION: Hero

Label (rewrite):

Current: Why Ownology

Proposed: Why I.A. — not AI

Headline (rewrite):

Current: “The AI knowledge layer your production software was never designed to be.”

Proposed:

Around here, I.A. doesn't stand for Artificial Intelligence.

Subheading (rewrite):

Current: “Your production system records what happened. Ownology tells you what to do about it — drawing on your own SOPs, vintage notes, and the institutional knowledge that lives in your team's heads. And for everything that was never in any system at all? Photograph it. Paste it. We'll read it.”

Proposed:

It stands for **Artisan Intelligence**. The intelligence is yours — accumulated over every vintage, every decision, every hard lesson. Ownology doesn't replace it. It holds it for you, organises it, and makes it available at 1am when the bandwidth is gone.

SECTION: I.A. Manifesto (NEW SECTION — insert after hero)

This is a new section that doesn't exist yet. It's the emotional anchor of the page — a short manifesto that defines what I.A. means before anything functional is explained.

Section label: What I.A. means to us

Heading: Six things I.A. stands for.

Six items (displayed as a grid or stacked list with amber labels):

Label	Meaning
Artisan Intelligence	Craft knowledge, not corporate automation. Every answer is grounded in the science and practice of winemaking — not generic internet content.
Always Informed	You'll never be caught without an answer. Ownology has read every document in your cellar office and never forgets a word.
Awake at 1am	Harvest doesn't keep business hours. Neither does Ownology. It's there when the fermentation does something unexpected and the rest of the team is asleep.
Actual Inspiration	Not just answers — ideas. The kind of insight that makes you think differently about a tank, a blend, a decision.
Accumulated Intelligence	Everything your winery knows — your SOPs, your vintage records, your tribal knowledge — made searchable. The knowledge that walks out the door when your senior winemaker leaves? It doesn't have to.
Answers Instantly	No lookup. No binder. No interrupting the head winemaker. The answer is there before the question has finished forming.

Closing line (pull-quote style):

"I.A. — not AI. I'm the winemaker. Ownology's got me covered."

SECTION: Two Systems (Your Production System vs Ownology)

Section label (unchanged): (keep as is — the comparison table is strong)

Heading (rewrite):

Current: (implied by the two-column layout) Proposed section label: Different tools. Different jobs. Both essential.

Production system card — heading (unchanged): Your Production System (InnoVint, Vintrace, WineDirect)

Production system card — body (rewrite):

Current: “Your production system is your **record-keeper**. It logs what happened, tracks compliance, manages inventory, and produces the reports your accountant and regulator need.”

Proposed:

Your production system is your **record of truth**. It logs what happened, tracks compliance, manages inventory, and produces the reports your accountant and regulator need. It is indispensable. It is also not designed to answer questions.

Demo chip at bottom of production card (rewrite):

Current: "Tank 7 Brix reading: 8.4 at 06:00" / Records the fact. Cannot advise on it.

Proposed:

"Tank 7 Brix reading: 8.4 at 06:00" / Records the fact. The question of what to do about it? That's Ownology.

Ownology card — heading (unchanged): The knowledge layer on top

Ownology card — body (rewrite):

Current: “Ownology is your **decision-support layer**. It answers questions, surfaces protocols, and helps every person in your cellar make better decisions — grounded in your own documents and verified wine science.”

Proposed:

Ownology is your **I.A. layer** — Artisan Intelligence that answers the questions your production system records but cannot answer. Grounded in your own documents. Grounded in verified wine science. Available on your phone, in the cellar, at 1am.

Demo chip at bottom of Ownology card (unchanged):

Answers from your Shiraz SOP + Scott Labs YAN Guide.

SECTION: Complementary, Not Competitive

Section label (unchanged): Complementary, Not Competitive

Heading (rewrite):

Current: “Already using InnoVint? Good — Ownology makes it more useful.”

Proposed:

Already using InnoVint or Vintrace? Good. Ownology makes them more useful.

Body paragraph 1 (rewrite):

Current: “Your production system is the source of record. Ownology is the layer that makes your team smarter about what to do with that record. They serve different moments in the winemaker’s day.”

Proposed:

Your production system is the source of record. Ownology is the layer that makes your team smarter about what to do with that record. They serve different moments in the winemaker’s day — and they are better together.

Body paragraph 2 (keep — it’s strong):

InnoVint logs that Tank 7 hit 8.4 Brix at 6am. Ownology answers the question your team asks next: “*Based on our Shiraz protocol, is this on track — and what should we do if it stalls?*”

Timeline demo (keep — it’s excellent)

The InnoVint/Ownology side-by-side timeline is one of the strongest pieces of copy on the site. Keep it exactly as is.

SECTION: Not a Marketing Tool

Section label (unchanged): Not a Marketing Tool

Heading (rewrite):

Current: (implied) Proposed:

WineryCopilot writes your Instagram captions. Ownology answers your cellar questions.

Body (rewrite):

Current: (the comparison table handles this — keep the table)

Add this paragraph above the comparison table:

There is a growing category of AI tools built for winery marketing teams — social media copy, tasting notes, email campaigns. They are excellent at what they do. Ownology is not in that category. Ownology is built for the cellar floor, not the marketing office. Every answer is grounded in your documents and cites its source. It does not write captions. It answers production questions.

Comparison table (keep as is — it's clear and effective)

SECTION: CTA / Waitlist

Section label (rewrite):

Current: Ready to Add the Knowledge Layer?

Proposed: Ready for I.A.?

Heading (rewrite):

Current: (implied) *Proposed:*

Your I.A. is ready when you are.

Subheading (rewrite):

Current: "Start your 14-day free trial. No credit card. No setup fee. Works alongside whatever production system you already use."

Proposed:

Start your 14-day free trial. No credit card. No setup fee. Works alongside InnoVint, Vintrace, WineDirect — or no production system at all. And if your most important knowledge is still in a handwritten notebook? Photograph it. We'll read it.

Pull-quote (keep from current version):

"InnoVint tells you what happened. Ownology tells you what to do about it. Most Ownology customers use both."

SECTION: Footer links (WhyOwnology page)

Current footer links: For InnoVint Users / For Vintrace Users **Proposed additions:** For Home Winemakers / Pricing

IMPLEMENTATION NOTES

What changes in code

1. **Homepage hero** — add the I.A. cycling typewriter mechanic above the headline. The cycling block replaces the current `section-label` (“Cellar Intelligence Platform for Winemakers”) or sits above it.
2. **Homepage subheading** — replace with the 1am emotional hook copy above.
3. **WhyOwnology hero** — replace headline and subheading.
4. **WhyOwnology — new I.A. Manifesto section** — insert after hero, before the Two Systems section.
5. **Pain points, features, pillars, science, problems, CTAs** — targeted rewrites as above.
6. **Footer tagline** — update to I.A. language.

What does NOT change

- The live demo card (hero right column) — keep exactly as is
- The InnoVint/Ownology timeline demo on WhyOwnology — keep exactly as is
- The comparison table (Not a Marketing Tool) — keep exactly as is
- The science knowledge category grid — keep exactly as is
- All pricing information — no changes
- All CTA button labels — no changes

Tone reminders

- The winemaker is always the expert. Ownology is always the apprentice.

- “1am” not “2am” — you said 1am, and it’s more specific, more real.
 - No exclamation marks. No hype. The craft is serious.
 - Short sentences under pressure. Longer sentences for explanation.
 - *Italics* for the winemaker’s voice. **Bold** for the key concept.
-

This document is for review and approval before any code changes are made. Once approved, all changes will be implemented in a single pass.
